

ABC Atlas Access Installation Guide (Windows) – Anaconda & GitHub Desktop

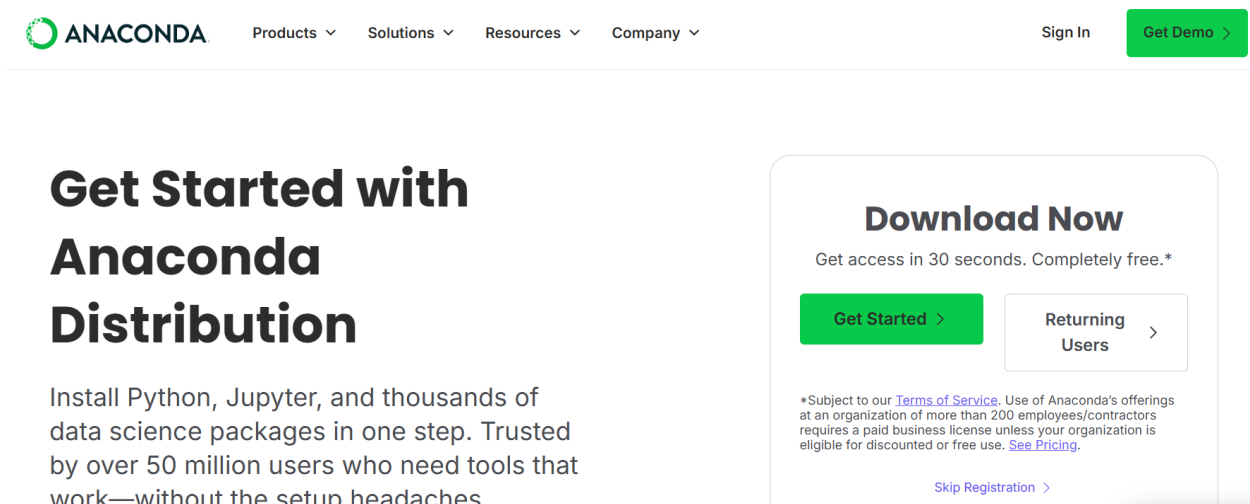

This guide goes through the steps of installing Anaconda (pages 1-5) and GitHub Desktop (page 6) on a Windows machine, for the purpose of accessing Allen Institute [ABC Atlas Access Jupyter Notebooks](#) (pages 7-11). Anaconda is an open-source library management system used to create and manage virtual environments (Anaconda is one of many options for this step). GitHub Desktop is used to access repositories on GitHub. This document was last updated on 05/29/26.

Installing Anaconda on Windows

Step 1: Go to <http://www.anaconda.org>, scroll and click “Download Anaconda.”

Step 2: Choose if you want to register or not by clicking “Get Started” or “skip registration.”

Step 3: Choose the Windows Distribution Installer.

Choose Your Download

Windows

Mac

Linux

Anaconda Distribution

Package and environment management with conda, Anaconda Navigator desktop app, and 600+ packages. Everything you need for data science.

Step 4: Follow the installation wizard.

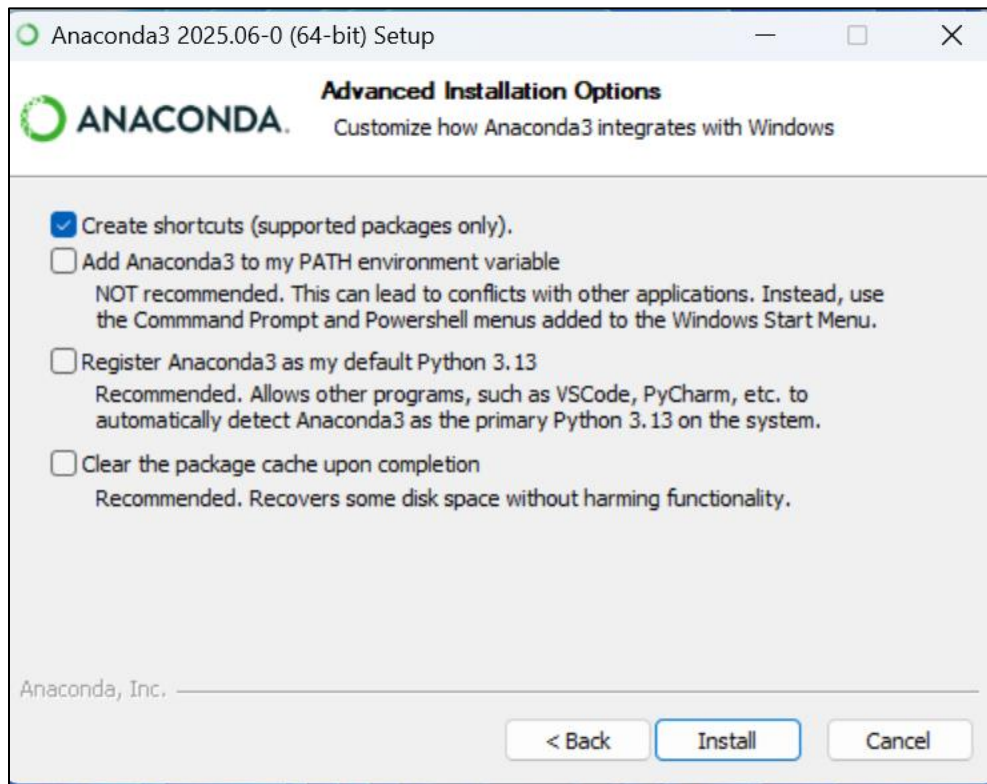

Step 5: Choose installation type.

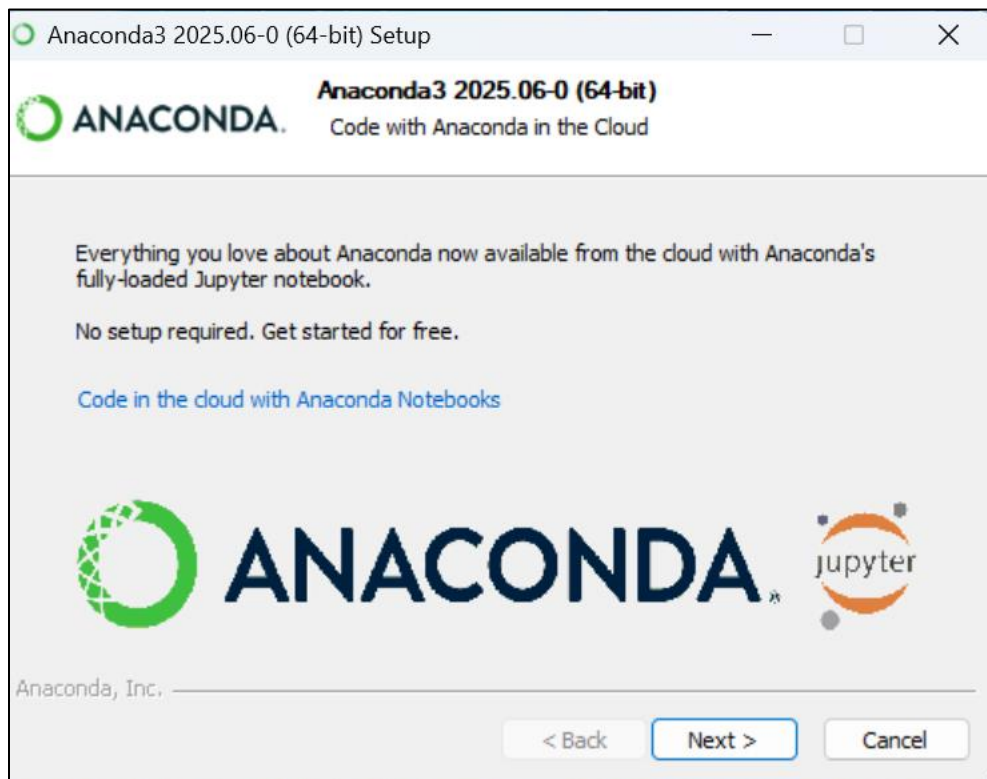

Step 6: Choose your installation folder.

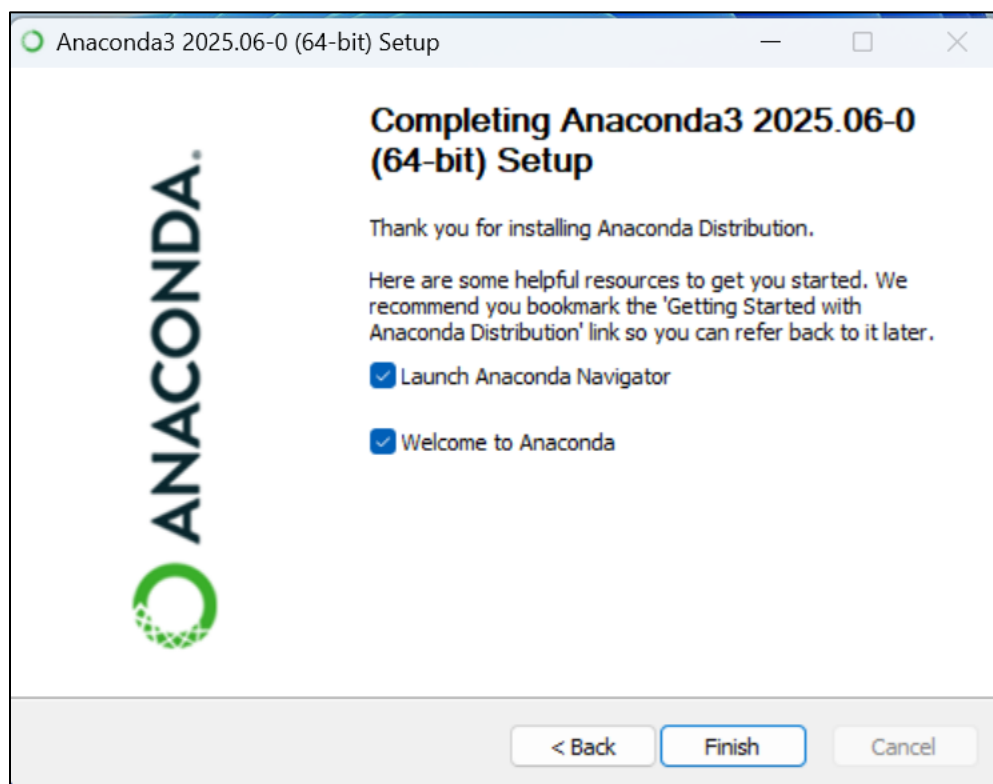

Step 7: Choose advanced installation options.

Step 8: Continue going through the installation wizard.

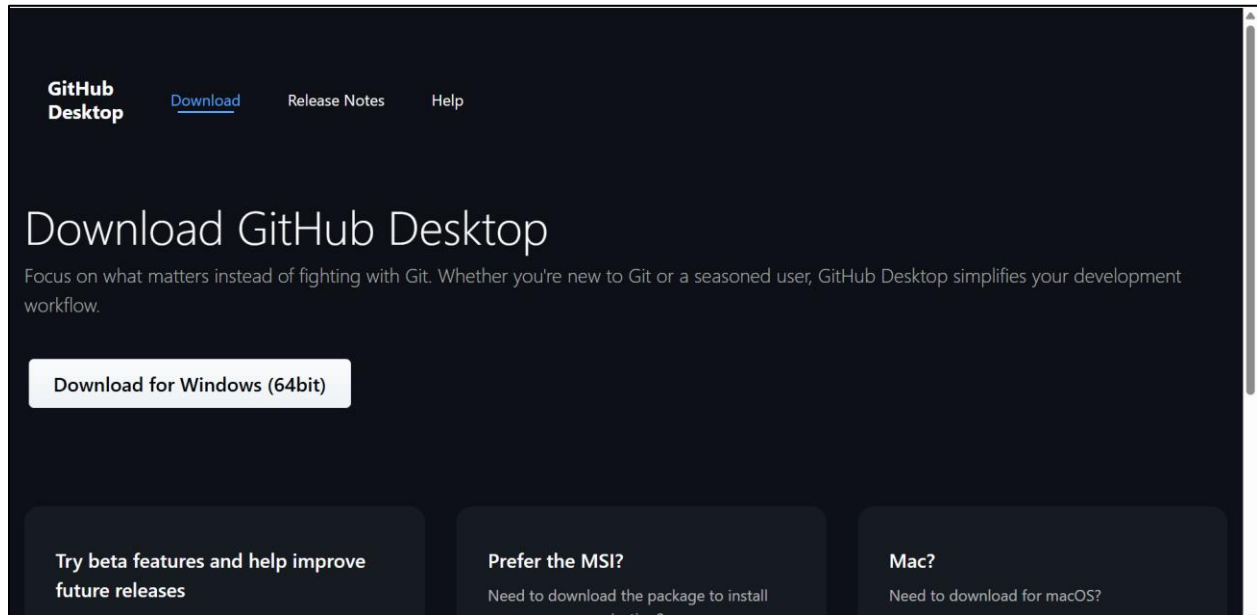

Step 9: Complete installation and launch Anaconda.

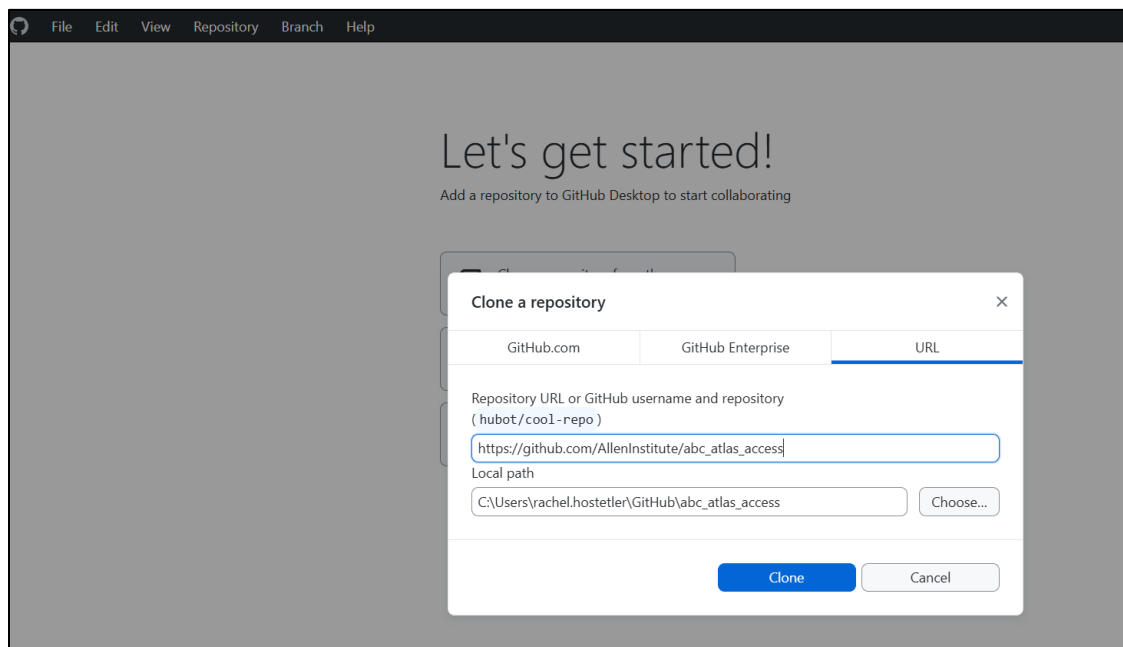

Installing GitHub Desktop for Windows

Step 1: Go to <https://desktop.github.com/download/> and click on the download for Windows.

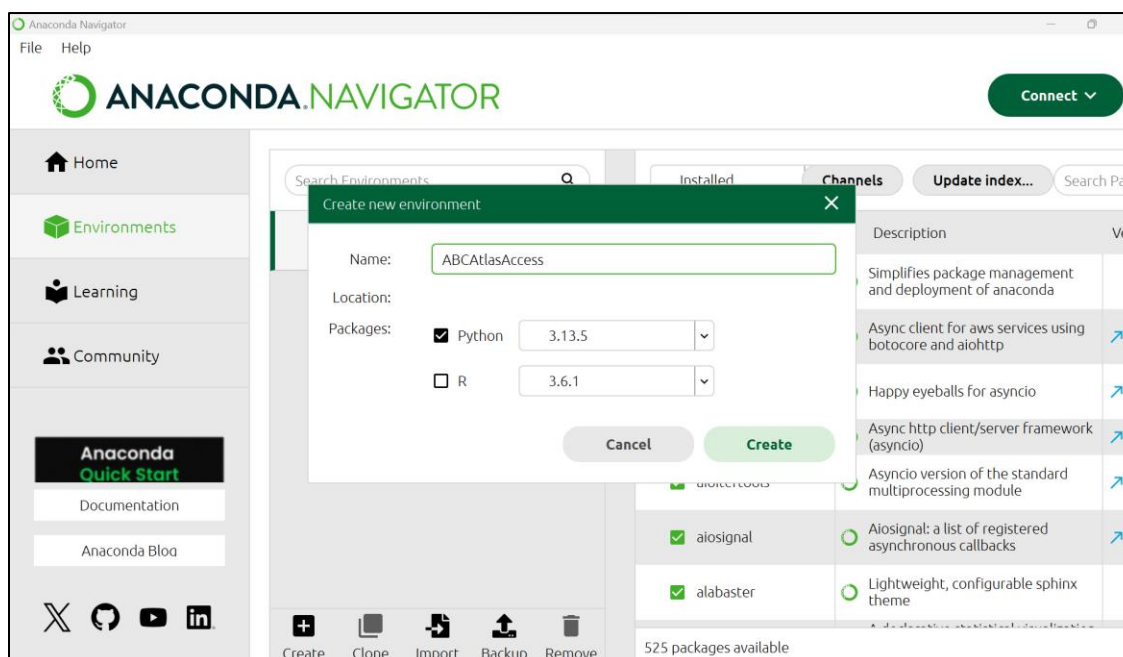

Creating a virtual environment for the ABC Atlas Access Jupyter notebooks using Anaconda and GitHub Desktop

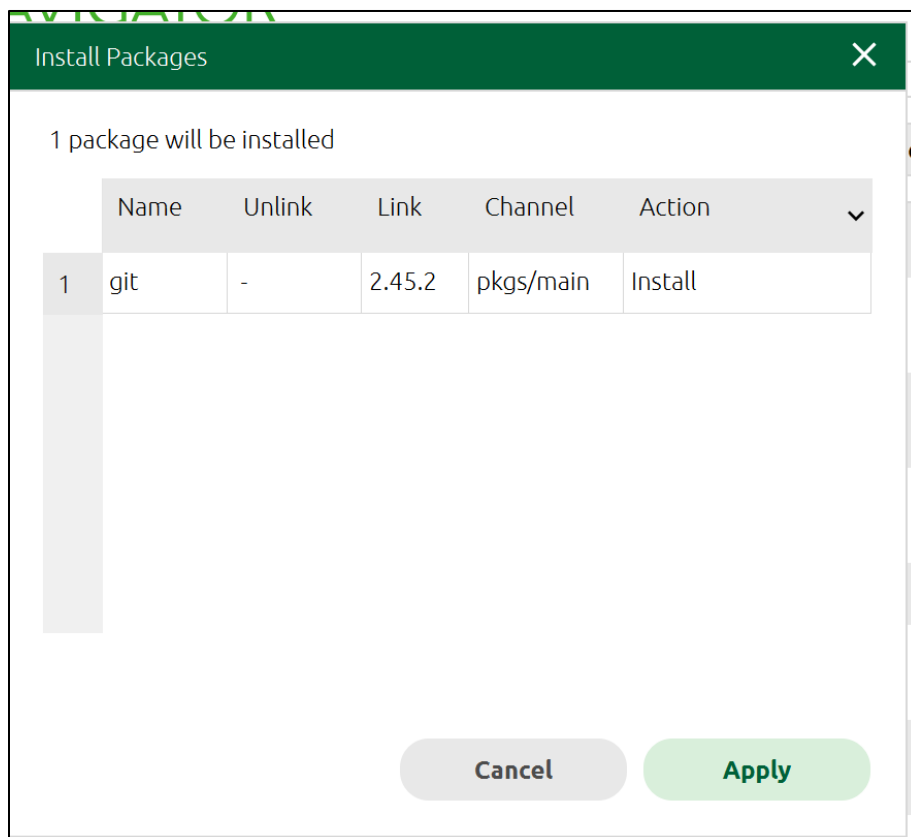

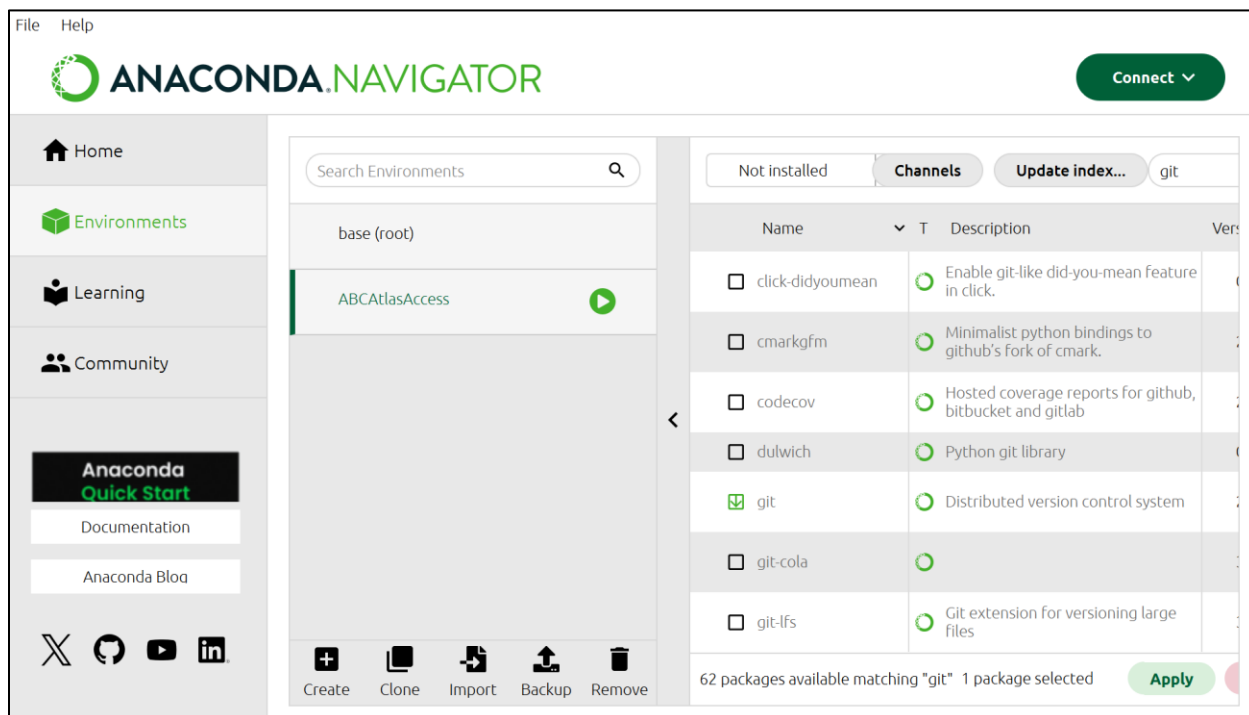

Step 1: Open GitHub Desktop (no account required), click “File” then “Clone Repository.” Next, click the “URL” tab, enter https://AllenInstitute/abc_atlas_access and click “Clone.” Note where the repository is saved.

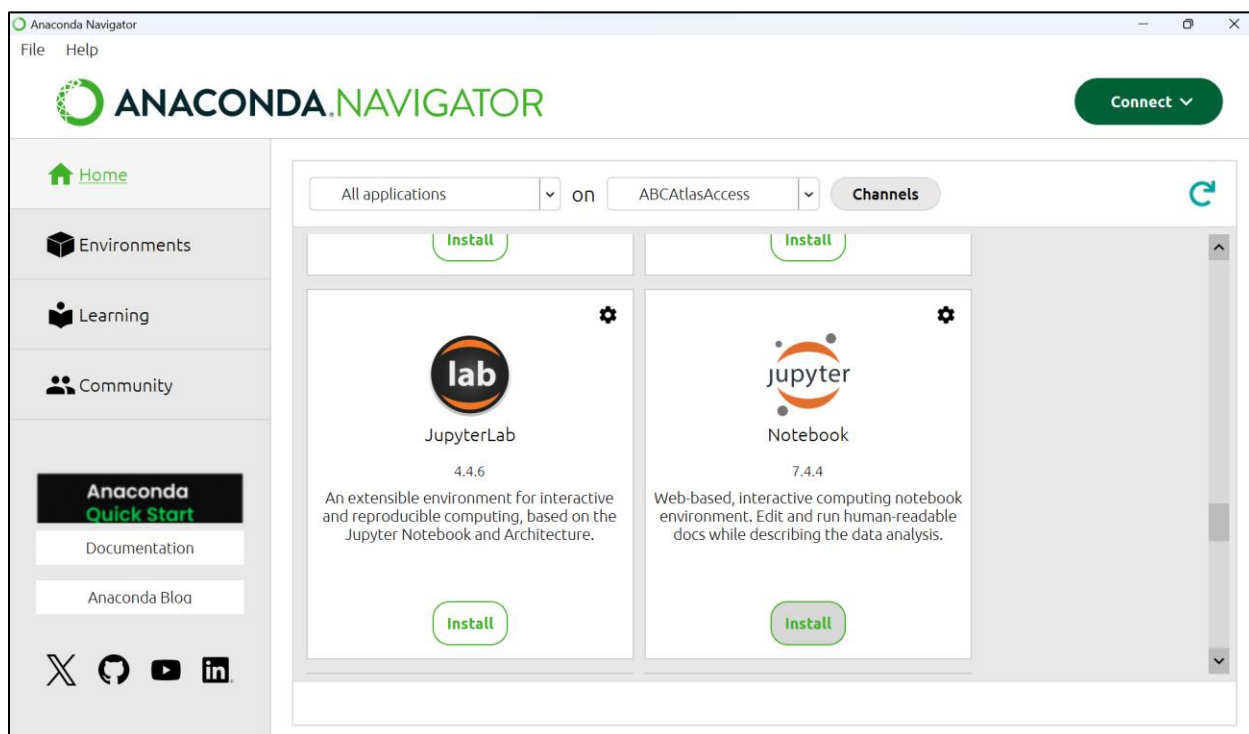

Step 2: Open Anaconda and create a new environment called “ABCAtlasAccess” with the latest Python package.

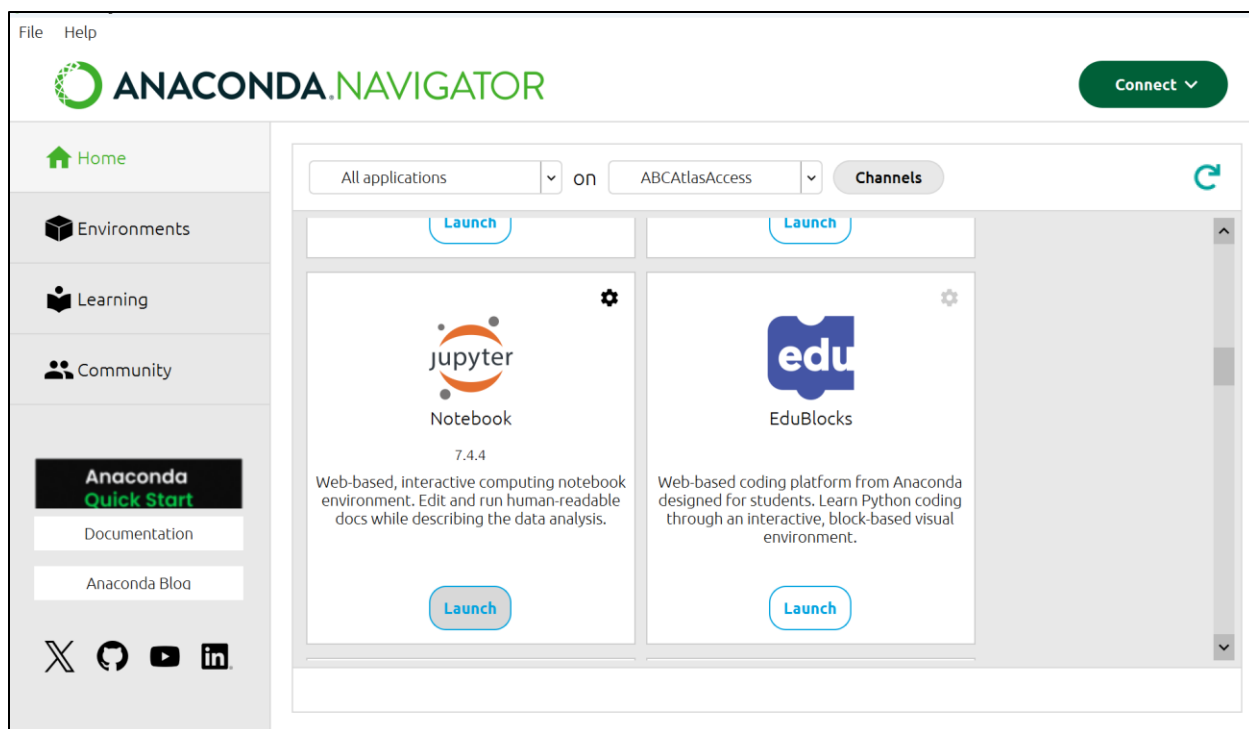

Step 3: After setting up the ABCAtlasAccess virtual environment, click on ABCAtlasAccess, then click on “Not Installed”, and search for “git” and install “git.”

Step 4: Next, install Jupyter Notebook in the ABCAtlasAccess environment.

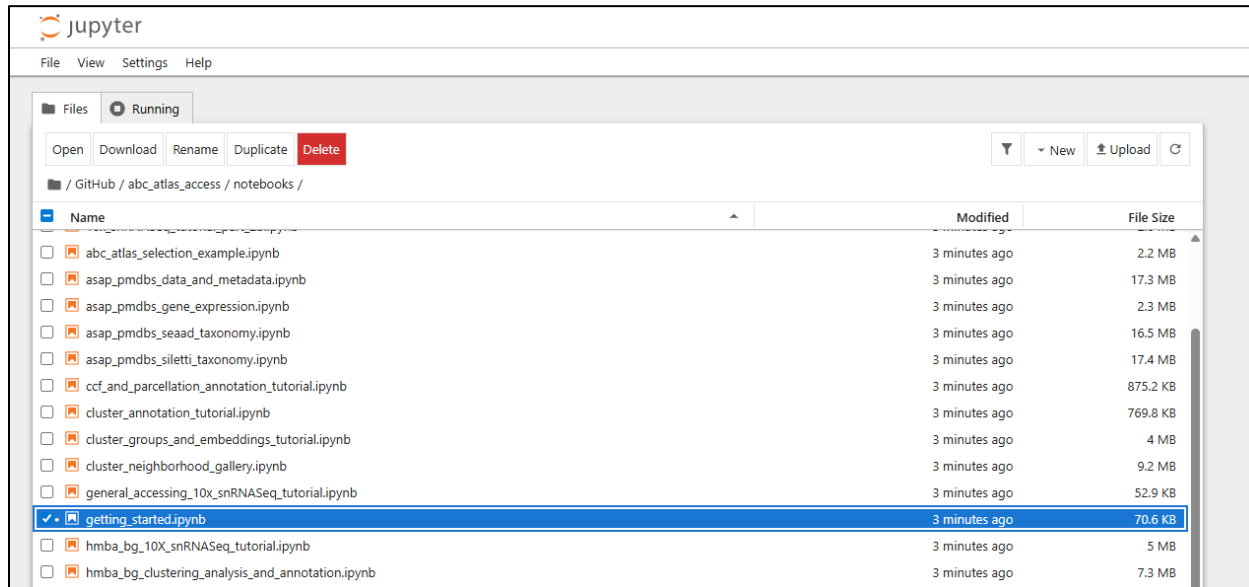

Step 5: After installation, launch Jupyter Notebook.

Step 6: Locate the ABCAtlasAccess cloned repository from step 1.

Step 7: Click on the “notebooks” folder and open the “Getting Started” notebook.

Step 8: After opening the notebook, run through all the cells, step-by-step. After running this notebook, all other notebooks in the ABC Atlas Access repository can be used.
